WHAT IS LASIK?

Laser Assisted in Situ Keratomileusis

LASIK (Laser Assisted in Situ Keratomileusis) uses laser technology to reshape the cornea, the clear tissue on the outer surface of the eye, to correct for myopia, hyperopia, and astigmatism. These are the most common reasons for wearing glasses or contact lenses. LASIK has a proven track record with millions of patients treated over 20 years since its approval in the United States.

Refractive Surgery			
LASIK	20% Off Retail or 10% off promo price	NA	NA
Visian ICL	20% Off Retail or 10% off promo price	NA	NA

ADVANTAGE

LASIK is an extremely safe, quick, and effective procedure with minimal downtime. We offer the latest bladeless laser technology, and our doctors, who have years of LASIK experience, are all fellowship trained in refractive surgery. Additionally, we provide personalized care and attention and are readily available if you should have any issues after the procedure.

RISK

95% SATISFACTION

LASIK has a more than 95% satisfaction rate among patients and a very low risk profile. We offer the newest, bladeless technology to provide the safest results.

Additionally, each patient undergoes a thorough screening to ensure they are candidates for the procedure.

Those who are not candidates for LASIK may be candidates for alternative procedures, such as photorefractive keratectomy (PRK) or intraocular lens implantation, both of which we offer as well. Your doctor will review the risks with you at your free consultation.

HOW LONG DOES IT TAKE?

The screening consultation may take two hours, as many tests are performed to ensure you are a LASIK candidate and to determine the planned treatment. On the day of the procedure, expect to be at the office for an hour, though the actual time underneath the laser may be as short as a few minutes.

LESS THAN 1 HOUR

SUCCESS RATE

LASIK HAS A PROVEN TRACK RECORD IN THE FDA APPROVAL STUDIES.
